

BLOLITE

KEY FEATURES

- FAST INSTALLATION
- CONTROLLED AND DEFERRED COSTS
- EASY UPGRADE AND REPAIR
- FLEXIBILITY

OVERVIEW

This air blown fibre optic cabling system from Brand-Rex is recognised as the best solution for this type of solution on the market. With installations across the world in applications from offices to aircraft carriers, there is no other product that can give long-term security and future proofing for your network.

Blolite is a simple and cost effective solution ensuring minimum risk and expenditure by the pre-installation of basic ducting around a site and then blowing in optical fibres (and paying for them) only when they are required. This system can be used in backbone and/or fibre to the desk applications, with up to 12 fibres installed in each tube, making this an ideal solution for high fibre count installations.

With 8 fibres in each tube the maximum distance fibres can be installed in 1000 metres in the horizontal and 300 metres vertically. Blolite can therefore, be used effectively in the risers of multi-tenant tower blocks, where 'rights of way' and 'permits to work' would previously have extended installation times due to access problems.

The fibres are installed using a specially developed 'Blo-centre', which uses compressed air to deliver fibre in a fast and low-stress manner. As the duct infrastructure is already in place, upgrading fibre or adding more fibre will not disrupt the workplace, leading to cost savings for the customer.

Many Blue Chip organisations have made Blolite their preferred fibre solution, including Manchester Airport, Hewlett Packard, Diamond Light Source, Ministry of Defence and the US Navy. Selecting Blolite is an excellent method of future proofing your installation, being ready for any future high speed networks.
